Assignment 5:

Create an interface and class implement that interface and display the results.

Source Code: *(Black colour in background is due to dark mode of IDE)*

Interface Source Code:

```java
public interface SampleInterface {
    public void printMessage();
}
```

Class Source Code:

```java
public class ImplementInterface implements SampleInterface {

    public void printMessage() {
        System.out.println("Hey There! I am a method coming from interface");
    }

    public static void main(String[] args) {
        ImplementInterface obj = new ImplementInterface();
        obj.printMessage();
    }
}
```

Output:

```
Hey There! I am a method coming from interface
```
